

NEW – Managing LEED Documentation

Are you ready to expand your knowledge of green building?

Attend the **Managing LEED Documentation** Half-day workshop presented by the U.S. Green Building Council. This program is for design, construction, and operations professionals who want to build on their existing knowledge of LEED with in-depth instruction on LEED documentation. Through case studies, examples, and discussions, this course will show how to effectively manage the documentation process and project team. Participants will see actual project templates to learn what documents to select, how to format them, and how information is uploaded in to LEED Online. Completion of a LEED Technical Review Workshop or a strong knowledge of the LEED Rating System(s) and general green building practices and technologies is strongly recommended.

WHY LEARN ABOUT LEED?

Ask any of the 8000+ building owners seeking LEED (Leadership in Energy and Environmental Design) certification right now. Owners and developers are demanding green buildings that save money while protecting the environment and occupant health. The USGBC's LEED Rating System™ is the nationally recognized rating system for green buildings. LEED is already being used by green building projects in all 50 states, and the market continues to grow.

LEARNING OBJECTIVES

After completing this course, you will be able to:

- Manage the documentation process for LEED certification, including the use of LEED Online
- Guide project team members on effective documentation management practices
- Identify and correct common mistakes in LEED documentation
- Anticipate challenging LEED credits and effectively manage them

WHO SHOULD ATTEND?

For project team members new to the LEED documentation process or who need additional support.
