What YOU Must Know About the New Mandatory Requirements Title 24, Part 11: CALGreen

Mandatory January 1, 2011 – CALGreen affects all new residential and commercial design and construction in the State of California

Avoid costly project delays and extra work!
Find out how YOUR local jurisdiction is enforcing the new code!

These comprehensive regulations offer a blueprint for a new generation of healthy, efficient buildings, with benefits for occupants as well as for the environment. All newly constructed residential, commercial, school and hospital buildings must comply with the new requirements.

In collaboration with the Building Standards Commission and the CA Dept of Housing & Community Development, this half-day seminar

will provide an introduction and overview of the mandatory requirements, voluntary measures, compliance checklists and the code's enforcement. In addition, 5 to 6 Orange County building officials will be present for a Q&A panel concerning what their jurisdictions have adopted and how the new requirements are being enforced.

Presented by Charles Russell, Vice President of VCA Code Group

SPECIAL PANEL – CALGreen for the LEED Professional

**How does CALGreen relate to LEED?
What does it mean for the LEED Accredited Professional or Green Associate?**

This special panel will focus on the implications of CALGreen for the design and building industries and what it requires of YOU. They will break down the relationship between the LEED program and the mandatory and voluntary measures detailed in the new code. This panel will consist of CALGreen trained LEED APs from the Orange County area.

If you are a LEED AP or LEED GA, this seminar is a MUST.

**SEATING IS LIMITED
REGISTER NOW!**
